Hi [REDACTED],

Even though the business is not operating and generating waste, there is still chemicals on-site that warrant the need for the permit. However, if SoloPower has the chemicals disposed of or hauled off, we can begin the process of closing out the permit. The City will want to see shipping manifests and disposal logs for all chemicals removed from the site, so please be sure to save the documentation. SoloPower will need to submit a formal letter to the City stating the facility will no longer be used for production and has gone out of business. We would conduct a final inspection and then we can close out the permit. Please note permit renewal fees will be coming up in the next couple months. If the company would like to close the permit out, we should get started on this soon to save you the application fees. Please let me know if you have any questions or if I can help.

-Nick

Nick,

I was just thinking. Why do I even need this permit any longer? We are not in business and generating any waste.

Hi [REDACTED],

Thanks again for taking time for the City's inspection last Thursday. Please see the attached files, they contain the inspection follow up letter, inspection report, and the authorized signatory form. I will accept a scanned/email copy of the authorized signatory form. Please let me know if you have any questions. Thank you -Nick
